Summary: *This article discusses improving the effectiveness of working with unorganized youth, as well as suggestions and reflections on how to improve the worldview of youth, increase their spirituality and gain their place in society*

Key words: *unorganized youth, society, spirituality, opportunity.*

We know that at present our country has created opportunities and attention to young people. In our country, talented initiative youth demonstrate high results in all areas. We know the future of our country in the hands of young people very well, and in the future, in educating young people in the spirit of patriotism, national traditions, national values, we must pay special attention to education and upbringing. Upbringing cannot be separated from education, so without young people it is impossible to imagine the fate of the country, nation, homeland. The education of young people begins primarily with a sacred family. If the family is at peace, society is at peace. In order not to create gaps in the spiritual world of our youth, we must educate them from childhood in the spirit of a healthy lifestyle, respect for national values. Therefore, if you want to raise a child, first of all, educate yourself in order to get a quality education and high results, you need to pay special attention to the teachers who teach him. Here we can achieve quality education and high results. Today, all over the world, religious extremism and terrorism are, of course, sad, but young people who do not yet understand what life is, arm themselves and confront the land shed by its cord blood. Each of us, every citizen of the Republic of Uzbekistan, is equally involved in ensuring that vicious ideas do not arise in the minds of young people. As parents say in seven mahallas per child, we have no right to neglect what is happening. This is one of the main reasons why people become indifferent.

Nowadays, in our sacred Uzbekistan there are all conditions in which science and technology are highly developed. Therefore, what prevents young people from acquiring high knowledge and a level of patriotism? Can this be called "ninetism" or "the wrong upbringing that was given to parents and teachers in their time," or can environmental influences lead to thousands of such examples? The use of modern media by the Internet is mainly made up of young people.

Today, our youth receives a variety of information and information not only in educational institutions, but also through radio, television, press, and the Internet. In an environment where the world information

space is increasingly expanding, raising children unilaterally so that they do not do and do not see it, and surrounding them with an iron wall, undoubtedly does not meet the requirements of the time and our goals. We have set ourselves a firm goal to build an open free democratic society in our country and will never deviate from this path.

Working with disorganized youth is by far the most important issue of our time. In order to involve disorganized, alienated youth in political processes, globalization processes, society, we must make sure that online contests are organized through the Internet in each area aimed at increasing the spirituality of young people. Since unorganized youth are alienated from society, they cannot be disconnected from social networks. Therefore, special attention should be paid to the fact that unorganized youth are alienated from society.

As they say, heat is heat, cold is cold, and it is through social media that we can conduct mental assault work. These days, many people use the internet, which takes up most of our lives. Currently, many young people use telegrams and WhatsApp. Using these means of communication, we consider it necessary to organize Internet competitions so that young people in all areas can spend their free time both efficiently and meaningfully.

However, using the media, young people leave no room for "sufficient information." We believe that it would be advisable to add interesting programs to this connection. Particular attention should be paid to another issue: thousands of students study at universities, but we believe that it is necessary to strengthen the work on the employment of all these personnel and pay attention to the reliability of the contracts concluded.

Only in this case could we create the ground for young people for political processes and find their place in society. Each of us is involved in disorganized youth. As a solution to this negative situation, we consider it necessary to increase the number of sites inherent in our national culture, including in order to educate young people on the Internet in the spirit of love for the Motherland, respect for national traditions and values. In the current information age of the 21st century, we believe that it is through the information Internet that we would provide young people with the opportunity to effectively spend their free time.

Among them are the stages of the formation of Uzbek culture. Sites that capture nationality affect the consciousness of young people and show positive results. In order to strengthen reading activities among young people in the first mahalla, it is necessary to organize libraries and increase the number of competitions among readers. Then we could help youths to develop in the spiritual world. Obviously, it is necessary to take measures, assessing what is happening in the world and around us with open eyes, assessing with due accuracy the ever-increasing moral threats and threats. If we always pay attention to any circumstances, we can achieve what we expected.

In conclusion, it should be noted that by acting in harmony with time in educating young people in the spirit of good goals, we will undoubtedly achieve our goal.
