Annotation: This article discussed about improving the quality of education today, its problems and their elimination, as well as its prospects.

Key words: education, quality of education, curriculum, educational institutions, improvement flow of information.

Today, a number of works are being carried out in our country to further improve the education system. The social, economic and political changes taking place in the life of our country, in turn, affect the activities of educational institutions.

In recent years, conditions have been created in our country for the wide promotion of national, spiritual and moral values in the lives of young people, for the education of spiritually rich and harmonious individuals by teaching our cultural and historical heritage. . In particular, in order to form their desire to learn, opportunities are being created to receive modern education, to work, to engage in creativity and sports, and to have healthy and free thinking. On the other hand, it should be recognized that most of the youth of our country, having successfully acquired a scientific career, become an active participant in the reforms being carried out in our country, have the opportunity to find their place in the social life of the society, and contribute to the development of our country. plugs.

Our sages praised learning and expressed the following thoughts - "It is undoubtedly true that the career of knowledge is the best of careers. Wherever science and enlightenment are strong, that place is considered a place of happiness."¹ Indeed, it is no exaggeration to say that today's young people are growing up in a place of happiness. Because the leader of our country has created enough conditions for our youth to get a good education - "We have set ourselves the great goals of building the foundations of the third renaissance, for this new Khorezms, Berunis, Ibn Sinas, Ulugbeks, We need to create the environment and conditions that will educate Navoi and Babur.

For this, one of the most important tasks is to directly improve the quality of education and develop it. In fact, today in our country, the spiritual-intellectual potential of the young generation, their way of thinking and worldview, education of a well-rounded person who lives with love and loyalty to the Motherland and its people, and the training of qualified personnel who will contribute to the development of our country are directly important. depends on the development of the lim system.²Therefore, in order to improve the quality of education, it is necessary to organize the educational process in accordance with the requirements, to further improve the educational programs and the state education standard, to create new educational literature, and to use modern innovative information technologies in the educational process. These tasks are reflected in a number of Resolutions and Decrees of the President of our Republic, including on June 5, 2018, the President of the Republic of

Uzbekistan "Improving the quality of education in higher education institutions and their active participation in comprehensive reforms implemented in the country" Decision PQ-3775 "on additional measures to ensure" was adopted.

Nowadays, the quality of education has been further developed, and the nature of our people's pursuit of knowledge, which has been formed over the centuries, is being manifested once again. Our young people are trying to achieve perfection and have made education their highest goal.

The fact that the first step in the development of the quality of education is being reformed starting from pre-school education is an important factor in further improving the quality of education. In the short term, the increase in children's coverage of preschool education plays an important role in improving the quality of education in the school education system in the future, and the quality of higher education in general.

The school will be able to compete with the world's advanced educational technologies by further improving the quality of education through the use of new educational programs, the world's advanced educational technologies and their introduction into the national education system. .

The results of the analysis and study show that there are still some problems in our education system. Among them, we can cite the following:

- in some educational institutions, training sessions are not organized for learners to demonstrate their abilities;
- lack of widespread implementation of innovative pedagogical technology by pedagogues in educational institutions;
- lack of systematic and innovative activities in strengthening the theoretical and practical knowledge of students and putting creative ideas of talented young people into practice;

Eliminating these problems requires the regular improvement of the qualifications of our pedagogues, as well as the implementation of tasks such as launching their tireless research. This, in turn, places great responsibility on the pedagogue.

It should be noted that the organization of quality education is not only the task of pedagogues, but also of parents who are responsible for their child's future. It is not a secret to anyone that the fast, large-scale development of the information system and telecommunication technologies of the 21st century penetrates into almost all aspects and human activities, as well as the globalization of the information space, the increasing flow of information, have different effects on the minds and souls of our youth. is doing. Another sad problem is that some of our youth are surrounded by unnecessary information due to the inattention of adults.

In the upbringing of the young generation, together with the pedagogues, the parents are equally responsible, because the child is brought up in the family first of all, the influence of family pedagogy in their education and upbringing is very great, because, "The family and society play a role in raising a perfect person." Its implementation on the basis of integrity and continuity in education is a whole legal process. Family pedagogy serves the society to perfectly fulfill the priority tasks of the important state policy on personal education, it is the activity of parents who jointly collect knowledge on education, test and implement the rules of child education. In the family, parents should be able to set clear goals, work on themselves, research, see the results of using selected tools and methods, and have the art of parenting.³

In short, to eliminate existing problems and shortcomings in improving the quality of education, to clearly define the goals and tasks in this way, to use the world's best practices for this, to combine information technologies with pedagogical technologies and directly with parents. joint application

serves to organize quality education and improve the quality of professional training of future specialists and increases their efficiency. Also, the use of various methods and information technologies used in the processes of teaching and learning in educational institutions, focusing on the content leads to further development and improvement of the activities of educational institutions.
