

MAKING OF A GOOD TEACHER AND THE MAIN ROLES OF THIS PROFESSION

Yusupova Dilfuza Boris qizi

A student of SamSIFL

Supervisor: Gafarova Sh

ANNOTATION: This article highlights creating the best version of teacher and what kind of qualifications they should have to be in this process. An addition, it not only illustrates how many roles of a teacher there are in this digital era but also gives the most crucial data about this profession.

Keywords: teacher, teaching, student,

language, children, curiosity, learners, assignments, communication, mentorship, experiences.

ANOTATSIYA: Ushbu maqolada o'qituvchining eng yaxshi versiyasini yaratish va bu jarayonda ular qanday malakaga ega bo'lishi kerakligi ta'kidlangan. Bundan tashqari, bu raqmli davrda o'qituvchining qancha roli borligini ko'rsatibgina qolmay, balki ushbu kasb haqida eng muhim ma'lumotlarni ham beradi.

Kalit so'zlar: o'qituvchi, o'qitish, talaba, til, bolalar,

qiziquvchanlik, o'quvchilar, topshiriqlar, muloqot, murabbiylik, tajribalar.

АННОТАЦИЯ: В этой статье рассказывается о создании лучшей версии учителя и о том, какой квалификацией он должен обладать в этом процессе. Кроме того, он не только иллюстрирует, сколько ролей существует у учителя в эту цифровую эпоху, но также дает наиболее важные данные об этой профессии.

Ключевые слова: учитель, обучение, ученик, язык, дети, любознательность, обучающиеся, задания, общение, наставничество, опыт.

The theory of a good teacher in our society is related to the everyone's stereotypes. Due to the fact that people have various concepts about the perfect teacher, there may have some misunderstandings.

The person who wants to a good teacher is in need of several qualities. For example:

- Love children
- Are prepared
- Know their subject matter
- Engage students
- Challenge their students
- Teach lifelong lessons
- Have excellent communication skills

1. Teacher should have love for children.

It should go without saying, but you're probably not cut out for primary school if you're not social with young people. In addition to showing their love for their children, good teachers work every day with the intention of improving the lives of future generations. No matter how old or how skilled they are, they treat their students with respect and give them a sense of importance and individuality.

They encourage children to be themselves in a place where they feel secure to express their entire spectrum of emotions by fostering a welcoming environment. They create caring classroom environments

where students can feel a sense of belonging while listening to the worries expressed by parents and students with warmth and compassion.

2.The best teacher is prepared everything beforehand.

Not only do the best teachers set homework, but they also finish it themselves. An effective teacher uses lesson plans to strategically prepare for the classroom, much like a professional basketball coach does for the team during a game.

The instructor creates the day's learning objectives and the necessary homework to support their instruction in the lesson plans. Students can practice and develop new skill areas with the assignments. Outside of scheduled class times, teachers devote a substantial amount of time to organizing lessons and grading papers, which enables them to provide students with timely feedback. Great teachers use this feedback to decide when to try a different method in order to better reach the kids, when more time should be dedicated to a difficult task, and when any particular child needs more specialized attention.

3.From time to time they have some challenges, that's why all of the teachers had better know their subject matter.

You must have a thorough comprehension of your subject matter if you wish to become a teacher. Prerequisites or majors in the subject matter that they will teach are frequently mandated by school systems; a thorough understanding of a subject is necessary for educating the next generation of students in an efficient manner.

4.Engage students

People are likely to share anecdotes about their favorite teachers' unusual or inventive teaching strategies when you ask them about them. Children value the extra effort when it comes to sharing particular books, songs, or movies, using technology, or coming up with creative solutions. The study of history can be made more engaging by a teacher dressed in period attire. Similarly, a nature walk can enhance the significance of learning about deciduous trees.

Amelia Osman said :“I always begin by asking my conversation classes what they're interested in talking about”[4.19].

5.They have excellent communication skills

Children become more engaged and ready to learn when teachers can make their lessons memorable and exciting. Innovative and resourceful educators leave a lasting impression on students—and their courses, too.

Proficient educators are also outstanding communicators. They interact well with a wide range of people, including coworkers, parents, teachers, and students. Warm, approachable, and friendly, good instructors build deep relationships with their students. They communicate with parents frequently, sharing both developments and worries. In order to enhance both their own instruction and the schools where they teach, they collaborate with administrators and other educators. They work diligently with all groups and actively participate with all stakeholders.

A teacher's primary responsibility is to assist students in their pursuit of new information in a particular set of disciplines. This is true for learners of all ages, from young children to those pursuing doctorate degrees.

In the same way that students are more than simply empty canvases waiting to be filled with knowledge, teachers shouldn't confine themselves to the role of classroom teacher in the educational environment. Instead, a teacher's job is to help students shape their lives and make the subject relevant in the classroom. The lives and career decisions of their students can be significantly impacted by the proper teachers as they grow older.

1. Providing mentorship

A secure and motivated student is directly correlated with a knowledgeable and compassionate teacher. Pupils must understand that educators are concerned about their learning styles and factors that facilitate or impede the process of learning. Every student has unique needs, talents, aptitudes, interests, and social, economic, and cultural background. Teachers should work to understand these traits in addition to their unique learning styles. It is now the responsibility of the instructor to guide and support students in understanding their intellectual, emotional, and social requirements. Encouraging learners to become emotionally and psychologically stable helps them succeed academically by enabling them to gather and process information and make wiser decisions.

2. Inspiring learners

Instructors ought to be ready to step in at any time to support students' learning. Rather than considering teachers as instructors of particular disciplines, like science, language, or math, you want them to be imaginative and foster a passion of learning in their pupils. Teachers should be able to use a variety of teaching strategies that cater to the learning preferences and abilities of their pupils in order to accomplish this goal. For instance, they ought to motivate students to participate actively in their education. Ask the correct questions during an interview and pay attention to the answers to find educators that accept unorthodox approaches of teaching.

3. Nurturing healthy curiosity in learner

The most skilled educators are adept at encouraging a healthy sense of curiosity in their pupils. Seek individuals who develop engaging lesson plans with a variety of activities to accommodate various learning preferences. In the educational process, the teacher should see themselves as a co-learner, facilitator, and guide. It is the duty of the instructor to empower pupils to direct their own education. This occurs when teachers encourage pupils' innate curiosity rather than stifling it. Seek individuals who can create exams that measure actual accomplishments rather than just the capacity to retain information, and who can establish connections between learning objectives and lifelong worth.

4. Creating meaningful learning experiences

If students have some influence over the structure and subject matter of their education, they will work more cooperatively. Instructors can help students design lesson plans that will help them reach their objectives. Additionally, they can assist students in choosing how to apply what they have learned.

A teacher who views oneself as the end-all be-all should be avoided while recruiting. You require educators who can create multimedia-rich learning environments. It is the responsibility of educators to create and curate relevant learning experiences that enable students to overcome real-world problems on a daily basis.

These encounters give the theoretical concepts covered in class context. In order to assist students in meeting the required learning objectives, they also provide chances for the development of abilities and healthy mental and physical habits.
