

## SOCIO-PREVENTIVE SYSTEM OF ORGANIZATION OF EDUCATIONAL PROCESSES

**Siddiqov Xasan Taxirovich**

Urgench State University

**Relevance of the topic.** It gives a positive result if, through the study of the methodology of educational work, they are taught to independently, creatively solve the general issues of youth education on their own, are closely connected with the pedagogical practice of students' work activities and motivate them to self-education professionally. As a result, the study of this course is aimed at educating students: pedagogical treatment, culture of speech, pedagogical interaction, independent regulation of the mental state of the educator, drama and recessure of pedagogical influence, activation of independent educational activities of the Youth Union, Education of students in labor, vocational guidance, educational activities carried out outside the classroom, educational power of the family and - in the conditions of combining enthusiasm, general education schools, vocational schools, academic lyceums, there is no doubt that the curriculum will help students to educate themselves professionally.

Educational process educators-teachers in educational institutions of a specific profession, armed with the idea of national independence, must have the skills to bring it to the consciousness of every citizen. Only then will the Educator be able to educate.

The maturation of the human personality is very complex, and it is formed through a continuous long process. His upbringing is directly influenced by his parents, school, Neighborhood, Friends, public organizations, the environment, the media, art, literature, nature, etc. Therefore, upbringing is an indispensable attribute for All Society, for the formation of the future generation, every day, every time upbringing. In this regard, our President Sh.M.In Mirziyoyev's address to the Deputies of the Oliy Majlis, the fundamental turns taking place in the life of our people, the designation of 2020 as the year of "science enlightenment and development of the digital economy", determines the main content of the work to be done. Especially attention to science and enlightenment and education, education of spiritual thinking of students and young people is one of the important tasks facing our state, and this topic is one of the pressing problems in the state and is of great importance in the development of society. Our President Sh.M.Mirziyoyev, having reorganized the organization "Youth Union" of the Republic of Uzbekistan and paying special attention to the establishment of Youth Education, said that "youth is our future". Through morality, education is taught to establish only a good attitude, to behave well in a perfect person, while forming spiritual thinking and high consciousness. Gradually, this condition becomes a habit (reflex) in it.

**Conclusion.** Therefore, it is necessary to educate our current youth spiritually perfect human qualities and form them in themselves. After all, as President Shavkat Mirziyoyev said, "the upbringing of the younger generation has become extremely important and relevant in all times." In this regard, the education of high rules of etiquette explains the need to create conditions for the identification, development and stimulation of gifted children with spiritual thinking and consciousness.
